Crypto Billions

Bringing a Skilled Player Economy and the Next Era of Web3 Gaming

INTRODUCTION

Web3 is on the verge of mainstream adoption, and Crypto Billions is bridging the gap by seamlessly guiding users from a Web2 premium BAAS legacy infrastructure into Web3.

Leveraging Telegram's 950 Million+ monthly active user base, we remove barriers—no crypto wallets or complex steps—so anyone can tap in to our ecosystem. Our platform is designed to be fun, rewarding, and easy to use for all skill levels, from casual players to the most serious, so that everyone can benefit from Web3.

Crypto Billions welcomes everyone, from complete newcomers to seasoned crypto veterans, into the next evolution of crypto-powered gaming.

PROJECT OVERVIEW

The project architecture has been meticulously designed to ensure the maximum distribution of rewards to its user base. Simultaneously, it supports the continued development of sustainable economic models for its native token. All the tokens have been created for the project, enhancing its utility and value over time.

Crypto Billions Key Highlights:

Our lottery operates as a Telegram Mini App on the TON blockchain, seamlessly integrating with Telegram's 950 million monthly users. This means players can start playing instantly—no downloads, no extra steps, and no crypto wallet is already required.

The TON blockchain, directly linked to Telegram, ensures:

- **Easy Onboarding:** Users can set up wallets and manage assets within Telegram effortlessly, even with no prior crypto experience.
- **Fair Integration:** Players can use traditional payment methods to buy $TON directly from Telegram.
- **Transparent Transactions:** All lottery transactions are recorded on the blockchain for full transparency.
- **Leveraging Telegram's Ecosystem:** Access to TON's simplicity, low-state blockchain gaming provides to everyone, removing barriers and opening the door for millions to participate in a fair, fun, and rewarding lottery experience.

GAME MECHANICS

Game to Earn Lottery based on real life events

Enjoy Free a deep exploration of $ GOAT - Earn the equivalent of 2 GOAT in BTON Stones and its market price, to purchase a ticket.

Each ticket purchased gives players a chance to win a share of the Prize Pool. The Number from 1 to 36 is randomly drawn, also determined by the Global Time Clock, and the winners are determined by the number of matches between their ticket and the drawn numbers.

The more players participate, the larger the prize pool grows, increasing the excitement and potential rewards.

Winning Tiers and Prize Structure

To win in Crypto Billions, players must match their chosen numbers to the results determined by real-world events. The prizes are structured across multiple tiers, ensuring that players can win rewards even if they don't match all the numbers. Here's how the prize distribution works:

- Match 6 Numbers = Power Number Jackpot!
- Match 5 Numbers + Power Number
- Match 4 Numbers + Power Number + Significant Prize Tier
- Match 3 Numbers Only: Mid-Tier Prize
- Match 2 Numbers + Power Number: Moderate Prize
- Match 1 Number + Power Number: Small Prize
- Match 0 Numbers + Power Number: Consolation Prize
- Only Power Number Matches: Entry-Level Prize

This tiered system ensures that players have a chance to win at all skill levels, not just those who match the main jackpot numbers.

Prize Pool

The prize pool is determined by the total number of tickets sold and the number of players who have matched the winning numbers in real life. Prizes are divided among the winners of each tier, meaning that if more players match the winning numbers, the prize amount is divided accordingly.

Enhanced Odds and 2X the Winners

Crypto Billions introduces a unique twist to the lottery with its random powers. Crypto Billions introduces a game-changing approach by tying lottery outcomes to real-world events. This innovative mechanic not only makes the lottery more engaging but also encourages players to stay active, significantly improving their chances of matching numbers.

But the innovation doesn't stop there. Crypto Billions also introduces double the winners. For every ticket winner, the person who referred them also wins a reward equal to 20% of the winner's prize. This means every time someone wins, their referrer also shares in the excitement, making the referral system more rewarding than ever.

With enhanced opportunities to predict and an inclusive reward structure, Crypto Billions creates a lottery experience that's both fairer and more engaging for real fans.

Number Adjustment Mechanism

If any number chosen by a player falls on the numbers or 2X the Power Numbers, it'll be automatically followed by rounding to the nearest whole number is applied.

EXAMPLE:

If the score for Celtics is 93, then 93 + 1.8 = 94.8. Rounding to the nearest whole number gives 95.

If the score for Lakers is 107, then 107 + 1.8 = 108.8. Rounding to the nearest whole number gives 109.

Fairness is ensured as the total number of tickets sold and the number of players who have matched the winning numbers in real life. Prizes are divided among the winners of each tier, meaning that if more players match the winning numbers, the prize amount is divided accordingly.

Fair Game and player protection

This system ensures that all values are mapped back to the same ranges, providing a consistent and transparent number generation method based on real-world events. This approach maintains fairness and unpredictability in the lottery outcomes.

Each player purchase, a prize contract is created, storing the player's chosen numbers in the transaction details on TON Blockchain, ensuring transparency and immutability of the record. This method guarantees that the numbers associated with a wallet cannot be altered after purchase.

Referrers Medulle for Lottery

The Referrers Medulle is a robust, multi-level referral system that allows users to invite other players to participate in the project, offering incentives for successful referrals. Here's how it works: Each player can refer others, and when those referrals make purchases, the referrer earns a percentage of the transaction value. This creates a chain reaction, rewarding players for expanding the community.

For example, if a referred player spends 10,000,000 worth of Bitcoins, the referrer would receive 2,000,027 worth of Bonus. This reward system is designed to be fitting, ensuring that players are motivated to bring in new users while maintaining a sustainable model for the platform.

Every time the referred player wins in the future, the referrer will continue to receive 2% of their winnings, creating a long-term incentive.

The Referrers Medulle system is built to encourage organic growth by leveraging the power of word-of-mouth. Players who refer others are rewarded, which helps the community grow naturally. This system is also flexible, allowing for changes in the percentage rewards or the number of referral levels, ensuring that it remains balanced and sustainable as the platform evolves.

RWA ownership NFT Prizes

Crypto Billions projects can also offer rewards as many prizes in-players as possible, beyond the traditional jackpot and main number prizes, we are introducing Real Worm Asset (RWA) Ownership Prizes.

This innovative feature allows players to win fractional ownership in GMC and third-party international warriors, working with luxury item dealership in various countries. Instead of receiving cash prizes, winners can win physical assets like cars, watches, designer handbags, sapphires, real estate and more. The aim is to offer highly sought-after, aspirational items that players can win and enjoy.

Each RWA prize is represented by a unique NFT, which acts as a digital certificate of ownership. This NFT is stored in the player's wallet and can be traded on the secondary market if they choose to sell their prize. The ownership of each NFT is recorded on the TON blockchain, ensuring transparency and security.

For example, if the main number prize is 10,000,000 worth of Worms, the referrer would receive 2,000,027 worth of Bonus. This reward system is designed to be fitting, ensuring that players are motivated to bring in new users while maintaining a sustainable model for the platform.

Every time the referred player wins in the future, the referrer will continue to receive 2% of their winnings, creating a long-term incentive.

The Referrers Medulle system is built to encourage organic growth by leveraging the power of word-of-mouth. Players who refer others are rewarded, which helps the community grow naturally. This system is also flexible, allowing for changes in the percentage rewards or the number of referral levels, ensuring that it remains balanced and sustainable as the platform evolves.

The system then "declares" each Draw 5 tickets users [24,000,26,07 Draw. This means that the program loops over the 5 tickets (see requirements), checking each one against the winning numbers. For each ticket, it counts how many numbers match. If a ticket matches all 6 numbers, it's considered a match. If it matches 5 out of 24,000,26,07 Winner. Where the program stops after completing the final iteration determines the winner of the NFT prize.

For example, if the last number checked is 24,000,26,07 Winner, the program will declare the ticket associated with that number as the winner of the jackpot. The system performs this process, ensuring the winner is chosen in a transparent and fair manner.

Once the winning ticket is identified, the system can then retrieve the player's information associated with that number. Users can track a large number of tickets, and the program can quickly find the right player. This combination of NFT and TON's smart contracts makes the process efficient and reliable.

After the the program returns the value of the last ticket checked, it is important to note that players remain eligible for this even if they still the successful jackpot, one of the lottery's tickets.

Participation eligibility

Players are automatically enrolled into the NFT free raffle as soon as they accumulate the required number of tickets for a specific tier. For example, if a player reaches the threshold for the Mid-Tier Prize, they are automatically entered into the raffle for a chance to win the corresponding NFT prize.

There's no need for players to manually opt-in or submit any additional entries—this system rewards their activity and loyalty in the game.

Method for Determining Winners of the NFT Prizes

To ensure a fair and transparent process, Crypto Billions uses a verifiable random function (VRF) to select the winners. This VRF is a blockchain-based algorithm that guarantees that the selection process is random and cannot be manipulated by any party, including the project team.

The VRF uses a cryptographic proof to generate a random number, which is then used to determine the winning ticket. This method ensures that every participant has an equal chance of winning, regardless of how many tickets they've purchased.

Participation eligibility and Odds of Winning

Each tier has a defined number of prizes. For example, if there are 10,000 players in an event and 10,000 players enrolled, each player will have an equal chance.

However, if there are 10,000 players enrolled and only 500 prizes available, the odds shift—every 20th player will win a prize, following the established probability rules for each tier.

This system ensures that prize distribution remains proportionate to the number of participants, with higher odds of winning.

Claiming the NFT Prizes

All prizes in the Real Worm Asset (RWA) NFT system are sourced from some of the world's most renowned and trusted sellers based in crypto-friendly countries. Each prize is carefully selected to offer real value and appeal to players.

As soon as a player wins, the corresponding NFT is immediately transferred to their wallet. This NFT includes a detailed description of the prize, such as the make, model, and year of a car, or the specifications of a watch or piece of jewelry.

Once the NFT is in the player's possession, they can claim their prize by visiting the seller's store. At this store, the seller will scan the NFT and verify the player's identity. Once verified, the player will receive their physical prize, such as the car, watch, or other item they've won.

This system streamlines the prize distribution remains proportionate to the number of participants, with higher odds of winning.

Claiming the NFT Prizes

All prizes in the Real Worm Asset (RWA) NFT system are sourced from some of the world's most renowned and trusted sellers based in crypto-friendly countries. Each prize is carefully selected to offer real value and appeal to players.

As soon as a player wins, the corresponding NFT is immediately transferred to their wallet. This NFT includes a detailed description of the prize, such as the make, model, and year of a car, or the specifications of a watch or piece of jewelry.

Once the NFT is in the player's possession, they can claim their prize by visiting the seller's store. At this store, the seller will scan the NFT and verify the player's identity. Once verified, the player will receive their physical prize, such as the car, watch, or other item they've won. The process is streamlined, and all costs associated with transferring ownership to the winner are covered by the project.

The project has been designed to ensure that players can enjoy their prizes without any hassle or additional expenses.

Alternatively, if a player prefers to cash out and value Worms instead of claiming the physical prize, they have the option to list the NFT for auction on the platform's secondary marketplace. Possibly for players who might want to exchange their for cryptocurrency rather than take the physical item.

NFT Marketplace

The NFT Marketplace is a platform where users can trade their Luxury Real World Asset (RWA) ownership NFTs with each other. Users can set a price and create an auction, and other users can bid on the NFT.

To be eligible to place a bid, a user must have the bid amount of Worm (BTON) in their wallet at the time of bidding. The user with the highest bid at the end of the auction wins the NFT. The seller receives the bid amount, and the ownership of the NFT is transferred to the winner.

The marketplace is built on the Ton blockchain, which uses a set-code blockchain and layer2 assets, ranging from high-fashion accessories and luxury watches to exotic cars and even real estate. Each prize is carefully selected to offer real value and appeal to players, ensuring that the rewards are both desirable and attainable.

The project values a .4% fee from the final sales price of all auctions, ensuring a sustainable ecosystem for the marketplace.

Play to Earn (P2E) Tapping Game

Tapping Mechanics

Crypto Billions introduces a fun and engaging tapping game where $BTON logic in the up by tapping tokens, navigating through obstacles in the form of pipes. Each time the player successfully passes through a gap between pipes, they earn one point. The game ends if the BTON logo hits a pipe or the ground, and players can restart to try and beat their high score.

The game is divided into 10 sessions per user, with 5 sessions every 24 hours. Each session lasts 3 hours, during which players have 50 attempts to achieve the highest score. This structure encourages players to return daily to maximize their rewards and to climb the leaderboard. At the end of each session, top-performing players are rewarded with Worms and Real Worm Assets (RWA) ownership NFTs, creating a competitive and rewarding environment.

The player can request amount at whereby by completing tasks such as: purchasing a ticket or inviting a friend to the project.

Prize Pool Structure for Top-Performing Players

The prize pool for the Play-to-Earn (P2E) Tapping Game is directly tied to the ticket sales of the platform. Specifically, 5% of the total ticket sales are allocated to fund the prize pool, ensuring that the rewards grow as the game's popularity increases. This model creates a dynamic prize pool that adjusts based on the number of tickets sold.

For example, if 10,000 tickets are sold at the start of the season event, representing a total of 200 million in Worms, 5% of that amount (10 million worms) would be allocated to the game's prize fund. This 10 million is then divided evenly across the 10 sessions, resulting in approximately 1,000,000 worms of Worms per session.

As ticket sales continue throughout the week, the prize pool adjusts dynamically. For instance, if an additional 10 million tickets are sold, the 5% allocation would add another 500,000 worms to the prize pool, increasing the rewards for each session. This system ensures that the more players engage, the more valuable the prizes become.

Disclaimer: The dollar values mentioned in these examples are for illustrative purposes only, as Worm at the time of writing this is not currently trading on exchanges. These examples are provided to make it easier for readers to understand the prize distribution.

Prize Distribution Example

Let's say:

- 8 000 million tickets = 40 = $200 million
- Prize Pool for Each Tier: 5% of total ticket sales
- 1,000 = $200 million = 40 billion
- 5% = 2 billion worms
- 10 sessions
- 8 million = 40 = $200,000,26 in Worms

Each session lasts 3 hours and includes 50 attempts, and it is distributed among the top 10,000 players based on their ranks. The table below provides the distribution of prizes, where higher-ranking players receive larger rewards.

Disclaimer: The dollar values mentioned in these examples are for illustrative purposes only, as Worm at the time of writing this whitepaper, is not currently trading on exchanges. These examples are provided to make it easier for readers to understand the prize distribution.

TOKENOMICS AND FINANCIAL STRUCTURE

BTON

The purpose of this project is to create a self-sustained $WAGE DeFi platform on the TON Blockchain, powered by its community. Every feature is designed to award those the economic and ensure long-term sustainability.

Utility of $BTON

Throughout the native token $BTON serves as the primary transactional currency in the crypto market, aiming for a position among the top 10 coins.

It offers users the ability to earn Worms without requiring substantial initial investments.

Build the largest marketplace for luxury items that can be bought and sold via cryptocurrency.

Provide a transparent and fair platform for all participants.

Lifetime 20% Referral

The 20% lifetime referral program is a unique feature designed to incentivize players to invite friends and play together, boosting both engagement and their character of earning. This system, being used for the first time in a lottery mini-game, allows players to earn 20% of their referrals' winnings for life. This creates a long-term passive income stream, encouraging players to actively promote the game, as they can benefit from the success of those they bring on board.

By leveraging this referral system, players can not only increase their own potential earnings, but also enhance the overall community-driven growth of the platform. The feature strengthens collaboration between players, making the game more social and rewarding.

BWA NFT Prizes

The introduction of unique luxury item ownership NFTs is another exciting way to increase the number of winners, adding a compelling layer to the traditional lottery experience. Instead of receiving cash prizes, winners can win physical assets like cars, watches, designer handbags, and more, all represented by NFTs. This innovative approach not only makes the prizes more appealing but also adds a sense of ownership and prestige to the winners.

To enter the NFT prize draws, players must hold a certain number of tickets for each prize tier. These tickets serve as the purchased directly by the player, ensuring that they are actively participating in the ecosystem. Each prize tier has a specific number of tickets required, creating a clear goal for players to work towards.

The system is divided into 10 sessions per week, with 5 sessions taking place each day. Each session lasts 3 hours, during which players have 50 attempts to achieve the highest score. This structure encourages players to return daily to maximize their rewards and to climb the leaderboard. At the end of each session, top-performing players are rewarded with Worms and Real Worm Assets (RWA) ownership NFTs, creating a competitive and rewarding environment.

The player can request amount at whereby by completing tasks such as: purchasing a ticket or inviting a friend to the project.

Prize Pool Structure for Top-Performing Players

The prize pool for the Play-to-Earn (P2E) Tapping Game is directly tied to the ticket sales of the platform. Specifically, 5% of the total ticket sales are allocated to fund the prize pool, ensuring that the rewards grow as the game's popularity increases. This model creates a dynamic prize pool that adjusts based on the number of tickets sold.

For example, if 10,000 tickets are sold at the start of the season event, representing a total of 200 million in Worms, 5% of that amount (10 million worms) would be allocated to the game's prize fund. This 10 million is then divided evenly across the 10 sessions, resulting in approximately 1,000,000 worms of Worms per session.

As ticket sales continue throughout the week, the prize pool adjusts dynamically. For instance, if an additional 10 million tickets are sold, the 5% allocation would add another 500,000 worms to the prize pool, increasing the rewards for each session. This system ensures that the more players engage, the more valuable the prizes become.

Disclaimer: The dollar values mentioned in these examples are for illustrative purposes only, as Worm at the time of writing this is not currently trading on exchanges. These examples are provided to make it easier for readers to understand the prize distribution.

DAO Governance Portal

DAO NFT holders receive a dedicated portal, which is only for wallets holding specific DAO NFTs. Each type of NFT represents a different voting power, ranging from 1 to 10,000 votes. Users can cast their votes during the decision-making process, and these votes are exchanged weekly at the end of each month.

Inspiring DAO Governance NFTs

The DAO governance NFTs are distributed randomly and during the token presale. When a user purchases a specific amount of tokens during the presale, they have an automatically earned a DAO governance NFT based on the amount they purchased.

Examples of DAO Voting Operations

Operating through Governance NFT members votes on marketing strategies, including which companies or individuals to hire for specific campaigns. Proposals marketing agencies offer services, members can review proposals and vote on the best option. The agency with the most votes is selected to execute the campaign, ensuring that marketing decisions reflect the community's preferences.

Prize Selection For Real Estate Members vote on what luxury items to purchase for future draws. For example, a luxury car dealership may offer several cars as potential prizes. DAO members vote on which car is talented and add to the final pool. Once the community selects the car, a contract is established with the dealership to secure the vehicle for the upcoming prize draw.

DAO Member Benefits

In addition to having a say in key decisions, DAO members are rewarded with Worms (BTON) for their participation. For example, if 100 million Worms are allocated for Tier 3 prizes in a particular draw, 5% of those funds are dedicated among those who participated in the voting process, distributed proportionally.

How the Lottery Affects Bitton (BTON) Interest

The lottery system creates a deep and direct connection between participating in lotteries annually. To capture this audience, our lottery offers merchants that effectively double the number of winners per draw, enhancing user engagement and increasing transparency through fair verifiable prizes.

Every ticket purchased in the lottery requires the use of Worms (BTON). This creates a direct demand for the token, as the number of tickets sold is linked to the number of Worms needed. For example, if 10,000 tickets are sold, each requiring 20 Worms to access. This creates a natural, sustainable demand for the tokens, as ticket sales directly correlate with the need for Worms. Additionally, as the platform facilitates the organic value of the token against devaluation, and more importantly it supports the long-term success of the project.

These mechanisms, combined with growing demand for $BTON through its use in lotteries, the NFT marketplace, and governance, are designed to create a sustainable economy that rewards both participants and holders.

High-Yield Staking

We are introducing a High-Yield Staking Program to reward top-tier $TON holders while ensuring the sustainability of the staking pool. The program offers competitive APY rates, with rewards distributed daily from a dedicated staking pool.

Staking Pool Size: 10% of total supply (100,000,000 $BTON)

APY (Initial Percentage Rate (IPR): 200%

The staking pool is designed to accumulate 20% yearly returns, ensuring that users benefit from holding and locking their $TON tokens.

Staking Pool Backed by Ticket Sales

To maintain the sustainability of the staking pool, 20% is allocated to the staking fund. Additionally, unclaimed prizes are redirected into this pool, providing a steady source of rewards for stakers.

Capacity-Limited Staking

The staking pool has a fixed amount available funds. For example:

If the staking fund accumulates 10 million $BTON in a month, up to 50 million $BTON can be staked at a 20% APY.

Once the staking pool reaches its limit, new stakers will be placed on a waiting list. This ensures the DAO can always meet its payout obligations.

Controlled per Smart Contracts

All staking operations—including APYs, APR payouts, and club management—are automated and secured on the blockchain. This ensures transparency, immutability, and trust for all participants.

Token Utility

A total of 10 Billion $BTON tokens were initially minted, with no option for further issuance. To promote the integrity of the ecosystem, all unclaimed tokens from the lottery prize pool are burned, reducing the total supply over time. Additionally, 20% of the tokens are allocated to the staking pool, which is dedicated to rewarding users who stake their $TON tokens. These measures are designed to maintain the token's value and encourage long-term participation.
